Driveway solutions

Choosing the right products to transform your driveway and enhance the kerb appeal of your property is just part of the planning process for your project. What lies beneath your driveway is just as important as the stones or setts that provide the finishing touch.

It is vital that rainwater run off is managed correctly to ensure a sustainable driveway solution; select a professional qualified to install products correctly and to advise you on how to channel the rainwater which lands on your property – see page 152 for our permeable solutions.

DRIVESYS ORIGINAL COBBLE, mix of Iron Grey and Canvas, edged with Basalt

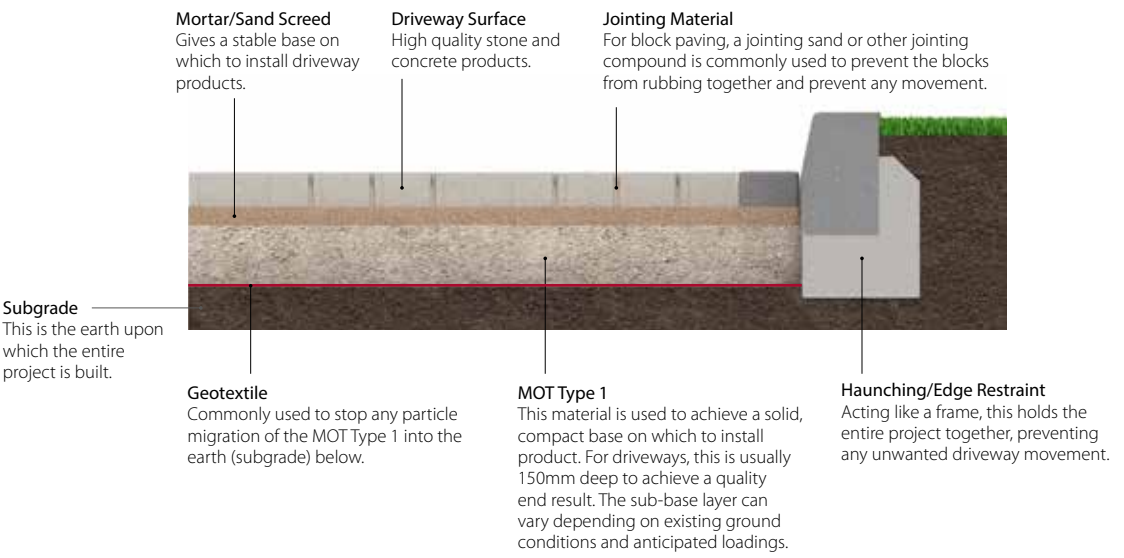

The importance of your driveway sub-base

Think about your house itself. It must be built on sound foundations to last, and the same is true for your driveway. In order to ensure that the finished project will last and retain both its aesthetics and safe, level surface, the appropriate sub-base must be selected and installed correctly.

The sub-base is typically compacted stone aggregate, laid on the subgrade (earth) that will support the paving products you have chosen to install. It is the main load-bearing layer for your driveway and its role is to spread this load and support the products evenly over the subgrade.

Illustrated here is a typical example of how your sub-base will be made up. The actual products and depths selected will change dependent upon the products you have selected for installation.

Remember, the sub-base is integral to structure and performance of the driveway and can often take up to 80% of the total project cost. Therefore, choosing the best possible product will not add significantly to the overall cost.

The potential pitfalls of incorrect sub-base installation:

Where the sub-base is installed incorrectly or is insufficient to support the chosen driveway products, the consequences are significant.

Poor edge restraint

Rutting

Sinking driveway

Choose a Marshalls Register Installer

Marshalls Register members are assessed on a regular basis to ensure they install our products correctly, giving you the right driveway to enhance the appeal of your property into the future. That's why 99% of people who use a Register member would recommend them to a friend.*

DRIVESYS® FLAMED STONE, Blue Pennant (BP).
Designed & installed By Greystone Building & Landscaping, Bramhall

DRIVESYS FLAMED STONE, Blue Pennant (BP).
Edged with DRIVESYS RIVEN STONE, Silver Grey (SG)

Creating a stunning and prestigious approach

Create an impact with this larger sized concrete system featuring a flamed-effect finish with the prestigious look and feel of Welsh Pennant stone. Realistic Gwrhyd Welsh stone face profiles used with a straight contemporary edge provide the ideal solution for both traditional and contemporary settings. Hard wearing colour and finish, available in five complementary sizes with co-ordinating roundtop edgings.

Marshalls recommends the patented Drivesys Driveway system is installed by Marshalls Register Installers.

DRIVESYS® FLAMED STONE

Patented Driveway System

1: DRIVESYS FLAMED STONE, Blue Pennant (BP)

Drivesys blocks come with a protective transportation seal which will remain slightly slippery underfoot until weathered. Once dissipated blocks may appear lighter in colour.

To complete every Drivesys driveway, each pack is supplied with the correct amount of ready mixed jointing compound, minimising fuss and number of deliveries.

Complete the look

Priora® Patented Permeable Paving Systems

Global population growth, continued urban expansion and the effects of climate change are all impacting upon our environment. In this country, recent severe weather events have highlighted the incidence of flooding, where our drains simply cannot cope with the amount of rainfall run off – a problem which is only likely to increase into the future.

This increased risk of flooding has led to changes in legislation, meaning that the environmental consequences of creating hard landscaped areas for vehicle parking must now be taken into consideration when planning your driveway project. Visit www.communities.gov.uk for further information.

However, new and replacement driveways of any size are exempt from planning permission requirements where they use Sustainable Drainage Systems (SuDS).

Marshalls offers a full range of driveway products requiring no planning permission and having a positive impact on the environment.

The Priora Sustainable Drainage System (SuDS) has been specifically designed to manage heavy rainfall events. Each 60mm block features the Marshalls patented Priora nib design, which allows surface water to pass between the blocks into a specially calculated sub-base without compromising the structural performance of the driveway.

Three of the Marshalls most popular driveway ranges offer Priora SuDS options; Drivesett Argent Priora (p156), Drivesett Tegula Priora (p158) and Driveline Priora (p160).

Marshalls permeable grids such as Grassguard or Drivegrid can also be used to create occasional parking areas capable of managing the rainfall that lands on your property as long as a permeable sub-base is installed. Grassguard works in a similar way to Priora block paving, retaining all the environmental benefits of natural grassed areas yet offering the versatility and hardwearing strength of concrete. Drivegrid is a premium gravel stabiliser which combines with a permeable geotextile and choice of aggregate to complement any style of property. Both have been designed to allow rainwater to flow through easily into the sub-base below.*

In the sub-base, the sand laying course and MOT Type 1 are replaced with a larger aggregate that creates voids to allow the water to drain through. This design stores water safely until it can be absorbed into the ground, instead of directing it to the local drainage system, where it could present a burden.

*Please note Marshalls Drivegrid and Grassguard products work differently by holding a smaller volume of water, whilst allowing continued use. Contact Marshalls Technical and Advisory Service for more information.

Where a permeable driveway is not an option

Adequate drainage must be incorporated into your driveway or patio design. Marshalls has launched Driveline Drain, an innovative linear drainage solution that successfully achieves a premium finish, reduces the risk of flooding and complies with government legislation. See p185 for more details.

Contemporary sustainable driveway solutions

The ultimate sustainable driveway option with no additional drainage required and no need for planning permission. Priora Permeable Paving is designed to enable rainwater to percolate directly into the ground below, without overloading the drains, thereby reducing flood risk. Argent Priora has all the design appeal of a contemporary granite-look finish and is available with a range of co-ordinating, walling and edging features.

Standard Block Paving, Bracken (BRA), edged with Charcoal (CH).
Installed by James Bird Landscapes Ltd, Sheffield

Attractive and long lasting driveway solutions

Budget block paving offers a more attractive, practical and longer lasting option than resin or asphalt alternatives. Available in a range of colours to create a durable driveway solution. And where a more premium finish is required, consider Driveline 50 for a top quality smooth, contemporary finish.

Designs to complement any driveway

Contemporary edge restraints designed to complement the full range of Marshalls paving and driveway products. Each edging perfectly complements their respective driveway ranges.

Drivesett Argent Edging has the same premium granite look as the Drivesett Argent range, see p144, p156 and can be used to match or contrast.

Driveline Nova Edging is designed to be laid flush with the Driveline Nova block paving, see p146 to seamlessly provide a discreet haunch.

Drivesys Roundtop Edging in Basalt coordinates with the expanding range of Drivesys block paving, see p136-140, p170-172.

Driveway Notes

General Driveway Notes

- All Marshalls driveway products in this brochure are designed for domestic vehicles only, they are not designed for commercial vehicles
- Driveways must be installed with edge restraints for stability
- Driveways must be installed in accordance with current legislation to manage and control water run-off.

Natural Stone Driveway Products

- Marshalls endeavour to ensure that all natural stone products are covered by the Fairstone guarantee of quality. If the Fairstone Logo is visible on a product page be assured that this product is processed and supplied only by proven ethical sources (see page 12 for more information)
- All Marshalls sandstone paving is covered by the Marshalls Stone Standard quality mark of assurance. Where the Marshalls Stone Standard logo is visible on a sandstone page, be assured that this product not only meets but exceeds the base technical levels outlined in the British Standard
- Due to the nature of this product, you may see some colour variation in natural stone products.

Marshalls Concrete Driveway Products

- When laying block paving products, for an even colour blend ensure blocks are taken from a number of packs. Also taking blocks from vertical rather than horizontal layers will ensure good colour blend
- Marshalls concrete block paving is manufactured in different factories. Colour may vary slightly across these works of manufacture
- Marshalls can supply kiln dried sand, contact your local service centre for more information.

For specific installation guides Marshalls Register Installers can also consult the Installer Pocket Guide. Or if you are laying any Marshalls driveway materials for the first time, please contact Marshalls Technical Advisory Team on 0370 411 2233 or visit our website www.marshalls.co.uk for installation advice.

p132 MAGNASETT

- A blended mix of premium stone
- Please note due to the nature of this product significant variation between stones can occur
- The use of the correct installation method is critical for this product, please contact Marshalls Technical Advisory Service for more information.

p134 DRIVEWAY SETTS

- A premium stone driveway product
- Please note due to the nature of this product significant variation between stones can occur
- For a co-ordinated natural stone look try Natural Stone Walling, p102, p110. Stone Steps p54
- The use of the correct installation method is critical for this product, please contact Marshalls Technical Advisory Service for more information
- For paths and edging smaller quantities can be ordered via the Order Select service, see p16.

p135 SAWN GRANITE SETTS

- A contemporary, linear natural stone driveway product
- Please note due to the nature of this product significant variation between stones can occur
- The use of the correct installation method is critical for this product, please contact Marshalls Technical Advisory Service for more information
- Please note Marshalls WeatherPoint 365 is not suitable for use with this product.

p136, 138, 140 DRIVESYS FLAMED, RIVEN & SPLIT STONE

- A premium, concrete driveway product which has a patented base design to automatically create the right size joint
- Drivesys is available in a number of sizes, colours and finishes
- Sufficient and appropriate jointing compound is delivered with every order
- Drivesys blocks come with a shiny protective transportation seal which wears off to reveal the slightly lighter true colour
- Drivesys Jointing Compound is guaranteed for a period of 12 months or 2 years if the customer has purchased a Marshalls Hard Landscaping Guarantee
- It is essential that the 'Drivesys Installation Guide' is followed, to request a copy call the Marshalls Technical Advisory Service
- It is recommended that Drivesys is installed by a Marshalls Register member
- For coordinating Drivesys Roundtop Edging see p188
- Marshalls recommends that Drivesys Jointing Compound is always used with this product for structural stability.

p142 DRIVELINE METRO

- A textured, concrete driveway product with attractive exposed granite aggregates
- Driveline Metro can be a single colour driveway, or you can purchase a number of different colour packs to create a unique effect.

p144 DRIVESETT ARGENT

- A textured, concrete driveway product with attractive exposed granite aggregates
- This product co-ordinates perfectly with Drivesett Argent Edgings, see p180, Argent Paving p52 and Argent Walling p108.

p146 DRIVELINE NOVA NEW

- A linear, concrete driveway product with distinctive colour aesthetic
- This product co-ordinates perfectly with Driveline Nova Edging.

p148 DRIVESETT SAVANNA

- A smooth concrete driveway product.

p150 DRIVELINE 50

- An upgrade to Standard CBP Driveline 50 is an improved driveway product with a smooth surface and contemporary sparkle

Common to all Priora Driveways:

- The Priora design drains water away safely in heavy rainfall without burdening the community drainage system
- If installed with the correct sub-base this permeable paving solution can be used in a front garden without obtaining planning permission
- Specific installation guidance must be followed
- The Priora System should not be attempted by the DIY enthusiast or untrained installer. It requires the careful calculation of a soil permeability test and appropriate use of specially graded sub-base aggregates.**Should an installer wish to undertake training for the installation of this product please call the Marshalls Helpline on 0345 820 5000 for further information.

Visit the Marshalls website to find your nearest Marshalls Register Installers trained to install Priora Systems, or call 0345 820 5000

p156 DRIVESETT ARGENT PRIORA

- An attractive, yet sustainable concrete driveway product with attractive exposed granite aggregates
- Manages rainfall run off in a sustainable way and does not require planning permission when installed correctly
- This product co-ordinates perfectly with Drivesett Argent Edgings, see p180, Argent Paving p52 and Argent Walling p108.

p158 DRIVESETT TEGULA PRIORA

- A sustainable concrete driveway product, with a traditional look
- Manages rainfall run off in a sustainable way and does not require planning permission when installed correctly.

p160 DRIVELINE PRIORA

- A sustainable concrete driveway product, with a traditional look
- Manages rainfall run off in a sustainable way and does not require planning permission when installed correctly.

p162 GRASSGUARD

- A permeable concrete grid, driveway system
- Ideal for occasional car parking spaces, but due to its nature it is not as even as other concrete block paving products, so extra care must be taken when walking over areas in high heels
- Manages rainfall run off in a sustainable way and does not require planning permission when installed correctly
- The Grassguard grid allows grass to grow through the blocks, providing a green option for parking.

p163 DRIVEGRID

- A composite permeable grid system, which is filled with gravel to create a car parking area or pathway
- When using this product it is essential that the area is framed with an edge restraint for stability
- For best aesthetic looks Marshalls recommends using a driveway entrance strip
- All components available as a system, delivered direct to site
- Grid and Membrane are packed together & cannot be sold separately.

p168 NATURAL STONE SETTS

- A premium stone driveway product
- Please note due to the nature of this product significant variation between stones can occur
- For a co-ordinated natural stone look try Natural Stone Walling, p102, p110. Stone Steps p54
- The use of the correct installation method is critical for this product, please contact Marshalls Technical Advisory Service on 0370 411 2233 for more information
- For paths and edging smaller quantities can be ordered via the Order Select service, see p16.

p170, 172 DRIVESYS ORIGINAL COBBLE & CLASSIC PAVER

- A premium, concrete driveway product which has a patented base design to automatically create the right size joint
- Drivesys is available in a number of sizes, colours and finishes
- Sufficient and appropriate jointing compound is delivered with every order
- Drivesys blocks come with a shiny protective transportation seal which quickly wears off to reveal the slightly lighter true colour
- Drivesys Jointing Compound is guaranteed for a period of 12 months or 2 years if the customer has purchased a Marshalls Hard Landscaping Guarantee
- It is essential that the 'Drivesys Installation Guide' is followed, to order a copy call the Marshalls Technical Advisory Service,
- It is recommended that Drivesys is installed by a Marshalls Register Member
- For coordinating Drivesys Roundtop Edging see p188
- Marshalls recommends that Drivesys Jointing Compound is always used with this product for structural stability.

p174-177 DRIVESETT TEGULA ORIGINAL

- A traditional look, concrete driveway product, perhaps Britain's preferred choice of driveway for the past decade and still a perfect option
- Why not try co-ordinating walling and edging see p114 & 187.

p178 DRIVESETT COPPICE NEW

- A traditional look, concrete driveway product with innovative colour aesthetic
- Take product from across a layer of the pack to achieve the correct colour blend.

p180 DRIVESETT DUO

- A unique traditional look, concrete driveway product,
- Each block is reversible, with a defined colour blend on each side, allowing individual design mixtures.

p181 DRIVESETT DECO

- A smaller traditional look, concrete driveway product, ideal for driveways
- This product can also be used for pathways, driveway entrance strips or borders.

p182 DRIVESETT NATRALE

- A riven textured, concrete driveway product available in a number of sizes.

p183 DRIVELINE ELISE

- A distinctive, concrete driveway products with a hammered granite texture.

p184 STANDARD BLOCK PAVING NEW

- A standard block paving product, made in different factories in England, Scotland and Wales therefore variations in colour and tone may occur
- A new Natural colour has been introduced to this range.

p185 DRIVELINE DRAIN

- Driveline Drain concrete linear drainage controls normal water run off from driveways and paving with no requirement for planning permission
- Accessories are also available for a complete installation,
- Specific installation guidance must be followed. Consult a Marshalls Register Installer. Or for further guidance contact Marshalls Technical Advisory Service
- Specific maintenance guidance is also available.

p186, 187 KEYKERB, TEGULA & DRIVESETT KERB

- Large or small kerb is the foundation of any successful driveway installation
- Specific installation guidance must be followed. Consult a Marshalls Register Installer. Or for further guidance contact Marshalls Technical Advisory Service
- Keykerb Corners are sold in pairs.

p188 DRIVEWAY EDGING NEW

- The perfect edge restraints to coordinate with the Driveway products or contrast with other products within the Driveways range
- Drivesys is a round top edging available in Basalt
- Argent is a granite effect, flat top textured edging in three colour options
- Nova is a flat top edging with colour in the top 20mm designed to be laid flush with the Driveline Nova block paving
- Specific installation guidance must be followed. Consult a Marshalls Register Installer. Or for further guidance contact Marshalls Technical Advisory Service.

Marshalls Joint Filling Sand - Available in Red and Golden

Marshalls Joint Filling Sand is a special kiln dried sand suitable for use with all types of block paving.

Coverage			
Paving thickness	50mm	60mm	80mm
Joint sand per 25kg bag	6-8m ²	4.5-6.5m ²	3.5-5.5 ²

Contact Marshalls Technical Advisory Service on 0370 411 2233

Driveway Notes

p156-161 PRIORA Conditions and Guidelines for Use

CONDITIONS REQUIRED FOR PRIORA

The grade of Priora featured in this brochure is only intended for normal domestic vehicles and pedestrian traffic, though occasional delivery vehicles over 3.5 tonnes gross weight can be tolerated.*

The Domestic Priora System is only intended for driveways or paths where infiltration is required only in the immediate Priora paved area and not from other surrounding paved or roofed areas (see rainwater catchment area guideline opposite).

In some parts of the country there are ground conditions where infiltration could adversely affect foundations to houses, therefore, if in doubt seek advice from a specialist or the local authority building control department.

Properties constructed pre 1920 may not have been built on traditional concrete foundation, therefore in this case, Marshalls Domestic Priora System should not be installed.

Check for services, Priora must not be installed if gas or electric services run through intended Priora areas.

Priora is a trademark of UNI-International Bausysteme GmbH.

GUIDELINES FOR INSTALLING PRIORA

Surface Gradient

The intended Priora area must fall away from the owner's house and any other buildings in the immediate vicinity.

If the driveway exceeds 20m in length and/or has a gradient greater than 1 in 100 then please contact Marshalls Technical Advisory Service.*

The top surface of the driveway should finish at least 150mm below any adjoining wall DPC level.

Existing Foundations

If your house lies adjacent to or less than 600mm from the proposed Domestic Priora driveway area, establish depth of house foundation before undertaking any soil test/Priora installation. The house foundation top surface must be 600mm (minimum) below the finished level of the top of the proposed Priora driveway.

Soil Strength and Permeability

Marshalls Domestic Priora System must be laid on a subgrade which has previously had an established and adequate existing driveway and an area which has a subgrade soil strength greater than 5%.

The Domestic Priora System is only suitable for soil areas where infiltration applies and the test criteria have been met as per the standard permeability test.

For the standard permeability a test hole should be dug for every 20m² of driveway. There should be a minimum of two holes. Holes/pits should be spaced evenly in relation to the proposed Priora area.*

Discharge onto Roadway

The Domestic Priora area must not discharge onto surrounding public roadway and pathways and towards any buildings.

Rainwater Catchment Area

No adjoining surface areas (rainwater pipes, roof areas, etc) must drain onto and into the proposed Domestic Priora driveway area, however, small areas such as door steps and garage areas are acceptable providing they do not exceed 5% of the driveway area.

Guideline: Catchment area = driveway area.
Catchment area = drained surface area.

Aggregates

Priora must be laid with 20mm and 6mm clean crushed stone aggregate to BS EN13242 and BS EN12620 to ensure compliance.

Trees

When installing in close proximity to existing trees, tree roots smaller than 25mm diameter may be pruned back, preferably to a side branch, using a suitable pair of secateurs or hand saw. Roots larger than 25mm should only be severed following consultation with an arboriculturist, as they may be essential to the tree's health and stability. Protection of the pavement will also be required, hence the requirement of a permeable root barrier system such as the Geoweb bio barrier system (www.Fiberweb.com) or similar which is non surface protruding, and therefore, does not present a trip hazard once installed.

Health and Safety

It is possible that more excavation for a Priora driveway may be required than that of a driveway constructed of traditional block paving, therefore, care must be taken when excavating ground to a deeper level. Particular care must be taken to protect the sites from children and partially sighted persons and for collapse of adjoining features such as boundary walls/fences.

Check for services, if they run through intended Priora areas, the service provider must be consulted before work commences.

Care must be taken when constructing over sewer, rainwater pipes and water pipes to ensure that the services remain supported for their full length by undisturbed material and are surrounded on the remaining sides by a minimum of 150mm of 6mm material to protect the service.

Important General Technical Information

Efflorescence

All concrete products may, in their early life, appear to lose some intensity of colour and experience a milky-white stain on the face of the product. This is efflorescence staining. It is a temporary phenomenon and is in no way detrimental to the performance of the material and responsibility cannot be accepted for its occurrence. Clay products may also suffer from a temporary white stain called efflorescence. This is quite different from efflorescence in concrete products and is caused by soluble salts within the clay being transported by water to the surface as they dry out. Responsibility cannot be accepted for its occurrence. For further information on efflorescence staining in both clay and concrete products, please call the Technical Advisory Service Tel: 0370 411 2233.

Other Weathering

Weathering and site conditions can occasionally cause other variations in shade to appear. Differential weathering can cause patchy dark discolourations on the surface of individual units. Again this will generally diminish over time and will not affect long term performance. Natural stone may develop added marking, deposits or patches as mineral content oxidises. All products can develop algae and organic growths under certain environmental conditions and may require cleaning. Areas adjacent to borders, plant pots and trees may discolour from transfer of plant-life; specialist maintenance advice may need to be sought.

Marshalls cannot accept responsibility for any of the above conditions.

Maintenance

Paving materials require periodic cleaning to maintain their appearance. Regular sweeping to prevent the build-up of detritus is recommended.

Light coloured blocks, whilst structurally sound for driveway use, do emphasise tyre marks and oil spills on the driveway. It must be accepted that these products will need more maintenance if the overall appearance is to be maintained.

Proprietary cleaning agents are widely available. However care should be taken when buying cleaning agents as some varieties contain a concentration of acid, which can adversely affect the appearance of concrete products, clay and natural stone.

A trial on a small section of paving is always recommended prior to using on the full area.

For general cleaning of dirt and algae, vigorous brushing with a stiff yard broom with plenty of hot detergent solution (washing up liquid or non-bio washing powder), thoroughly rinsed with clean water should suffice. Repeated treatment may be required for paved areas sited beneath trees or in permanent/ near permanent shade. In certain circumstances, prolonged contact with wet leaves can result in staining of the paved area. Such contact should be avoided wherever practical.

Power-washing

Power-washing with high-pressure equipment is not normally required. Should these methods be employed, the following precautions should be observed:

- Paving should be thoroughly swept to remove detritus (loose debris) that could act as an abrasive agent when moved by the force of a power jet.
- A trial area should be tested before larger scale power-washing takes place.
- No more than a medium pressure should be applied when washing paving.
- The power-washing lance should be held at an oblique angle to the paving and at least 200mm (8") from the surface.
- If excess sand is washed from the joints during the washing exercise, it is important that the joints are re-sanded with similar materials upon completion.
- If mortar joints between pavings are damaged during power-washing they should be re-pointed/made good with fresh pointing as required, to maintain the integrity of the paving.

Weatherpoint 365 Terms & Conditions

For full terms and conditions please visit Marshalls website at: www.marshalls.co.uk/weatherpoint

Suitability/Application

The paving flags illustrated in this literature are primarily intended for domestic/landscape use only.

Paving flags suitable for areas subject to intense foot traffic, i.e. pedestrian precincts and commercial applications, etc. are detailed in separate literature. This literature is available on request by telephoning: 0370 411 2233.

For areas subject to vehicular overrun (driveways, parking areas, etc.), block paving products are recommended, (see pages 132-184). The block paving products illustrated in this literature are intended for pedestrian and light vehicular overrun applications (driveways and similar).

For pavements subject to frequent overrun of heavy vehicles, block paving from our commercial/specification range should be used. These are detailed in separate literature, copies of which are available on request by telephoning: 0370 411 2233. Should customers be in doubt as to the suitability of any Marshalls product for a given application, please obtain guidance from our Technical Advisory Service Tel: 0370 411 2233.

Colour Variation

The colours shown in this literature are as exact as photographic and printing processes will allow. We strongly recommend that colours are judged and chosen from actual materials rather than photographic representation depicted herein. Although every effort is made to ensure consistency of product colour, variations between production batches can occur. We therefore recommend that, when purchasing materials, especially in the case of larger quantities, they all come from the same batch and that products are thoroughly mixed on site by drawing from a minimum of three packs.

Availability

Details of pack contents are listed for the guidance of stockists. Stockists are usually prepared to split full packs for sale in any quantity. Product dimensions and weight, etc. are nominal and subject to manufacturing tolerances.

*Patented Paving System

Priora is patented in UK and EP079168931.

Natural Stone

All natural stone sandstone products vary with differing geological conditions. For example, Silver Birch and Antique Silver Multi sandstone variations can lead to small particles of ironstone within the product creating a darkening of the surface with natural weathering. Being pale in colouration, this natural weathering is more obvious with Silver Birch and Antique Silver Multi as against the other natural stones in the Marshalls range.

Staining

Certain common garden chemicals such as Ferrous Sulphate can stain paving. Please check the information given on the container holding the chemical. If chemicals are spilt on the paving remove immediately by rinsing away with clean water.

Marshalls Commitment to Quality & Innovation

Marshalls is committed to innovative product development and manufacture. To help you obtain maximum enjoyment and long service from any Marshalls product, we would be pleased to make you aware of the following:

The evolution of new product design is continuous and information is subject to change without notice. Customers should check with the stockist to ensure that they have the latest details.

All Marshalls products are manufactured to the appropriate European Standard where applicable. Where products (or intended usage) lie outside the scope of a British (or European) Standard, Marshalls own standard will be employed. All products are supplied subject to Marshalls Standard Conditions of Sale, a copy of which is available on request. Liability in respect of any statements, conditions, warranties and representations made on behalf of the Company is limited in accordance with the terms set out in the Standard Conditions of Sale.

Health and Safety

Care should be taken when handling and installing Marshalls products. Guidelines on the Control Of Substances Hazardous to Health (COSHH) are available for all Marshalls products, either through our website, www.marshalls.co.uk/homeowners or from Marshalls Technical Advisory Service. Tel: 0370 411 2233.

Marshalls Register

Marshalls Register of installers are regularly inspected to ensure they comply with the membership agreement. Marshalls are not a party to the contract between the Registered installer and the customer. Marshalls cannot be held responsible for any installation undertaken by a Marshalls Register installer.

Register Installer

Details of membership are available from Marshalls Register support team on 0345 820 5000.

*Should you require a more detailed discussion on the intended use of the area, advice is available from the Technical Advisory Service on 0370 441 2233.

Hard Landscape Guarantee Conditions

Marshalls products are manufactured to the highest standards. The Hard Landscape Guarantee is only available for domestic projects installed by a Marshalls Register Installer where a guarantee has been purchased; the cost of the guarantee is £50 (+VAT) per £5000 of the installed value. The Hard Landscape Guarantee can only be issued by Marshalls upon receipt of a correctly completed Guarantee Request Form and the relevant fee. The Hard Landscape Guarantee covers Marshalls branded products. Marshalls hereby warrants, that in the event of the failure of Marshalls products used in the construction of a domestic driveway or patio installed at the address named on the Guarantee, replacement products will be supplied free of charge for a period of 10 years commencing from the installation date. **For products produced with Surface Performance Technology this period is extended for a further 10 years.**

Additionally, the labour costs incurred during the replacement of these faulty materials, and/or labour costs arising from faulty workmanship, will be free of charge for a period of 5 years commencing from the installation date. This guarantee is subject to the terms and conditions below. This guarantee is offered as an additional benefit by Marshalls and in no way affects any parties' statutory rights.

The house owner is responsible for applications for any relevant planning permission. Marshalls do not accept liability for application of planning permission on any project covered by the Marshalls Hard Landscape Guarantee or otherwise.

In the unlikely event of products reaching you in less than satisfactory condition, you should notify the stockist immediately with details of the product and batch codes printed on the packaging. In addition to this, responsibility for costs incurred for uplifting and relaying defective products may be prejudiced if, upon reasonable inspection, the defect ought to have been apparent prior to laying.

Pendle, Leyburn, Textured Utility, Utility and Richmond pavings are intended to serve the 'budget' end of the market and as such should not be confused with premium products such as Heritage or Coach House. In addition to this, because of their limited protection in transit, there is a significant probability of pavings bearing scratch marks to the face. Due to local manufacturing, precise colours and face finishes may vary and it is recommended that pavings from different factories are not mixed on site. Pendle, Leyburn, Textured Utility, Utility and Richmond therefore fall outside the scope of The Hard Landscape Guarantee.
